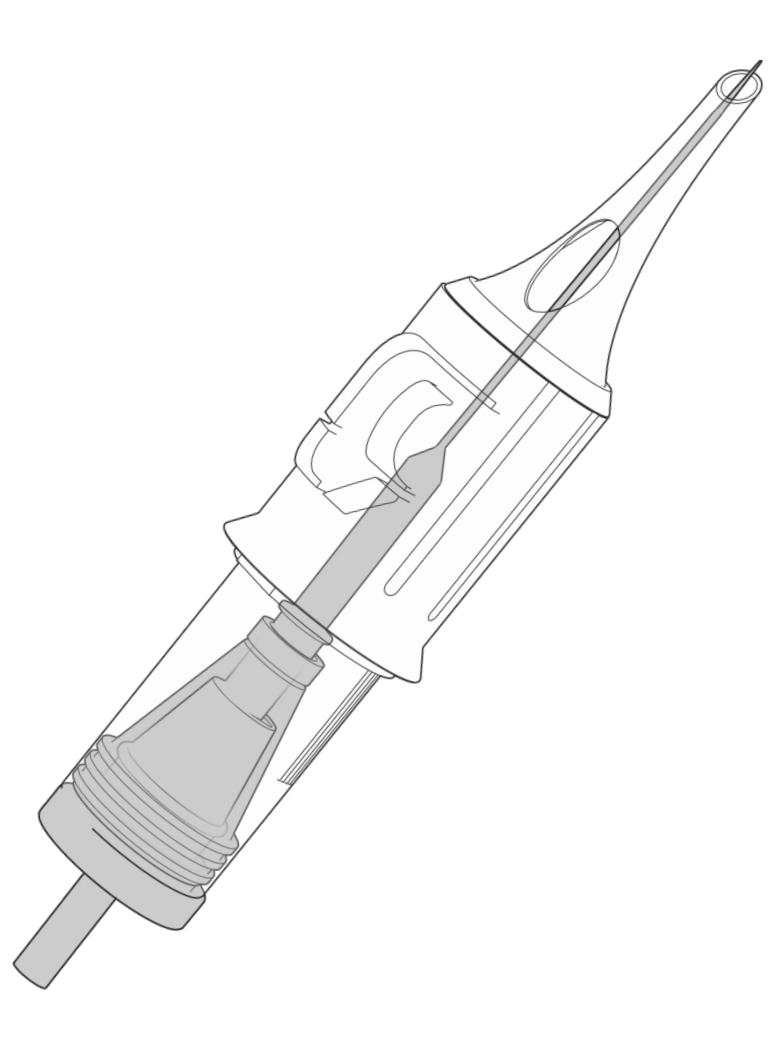
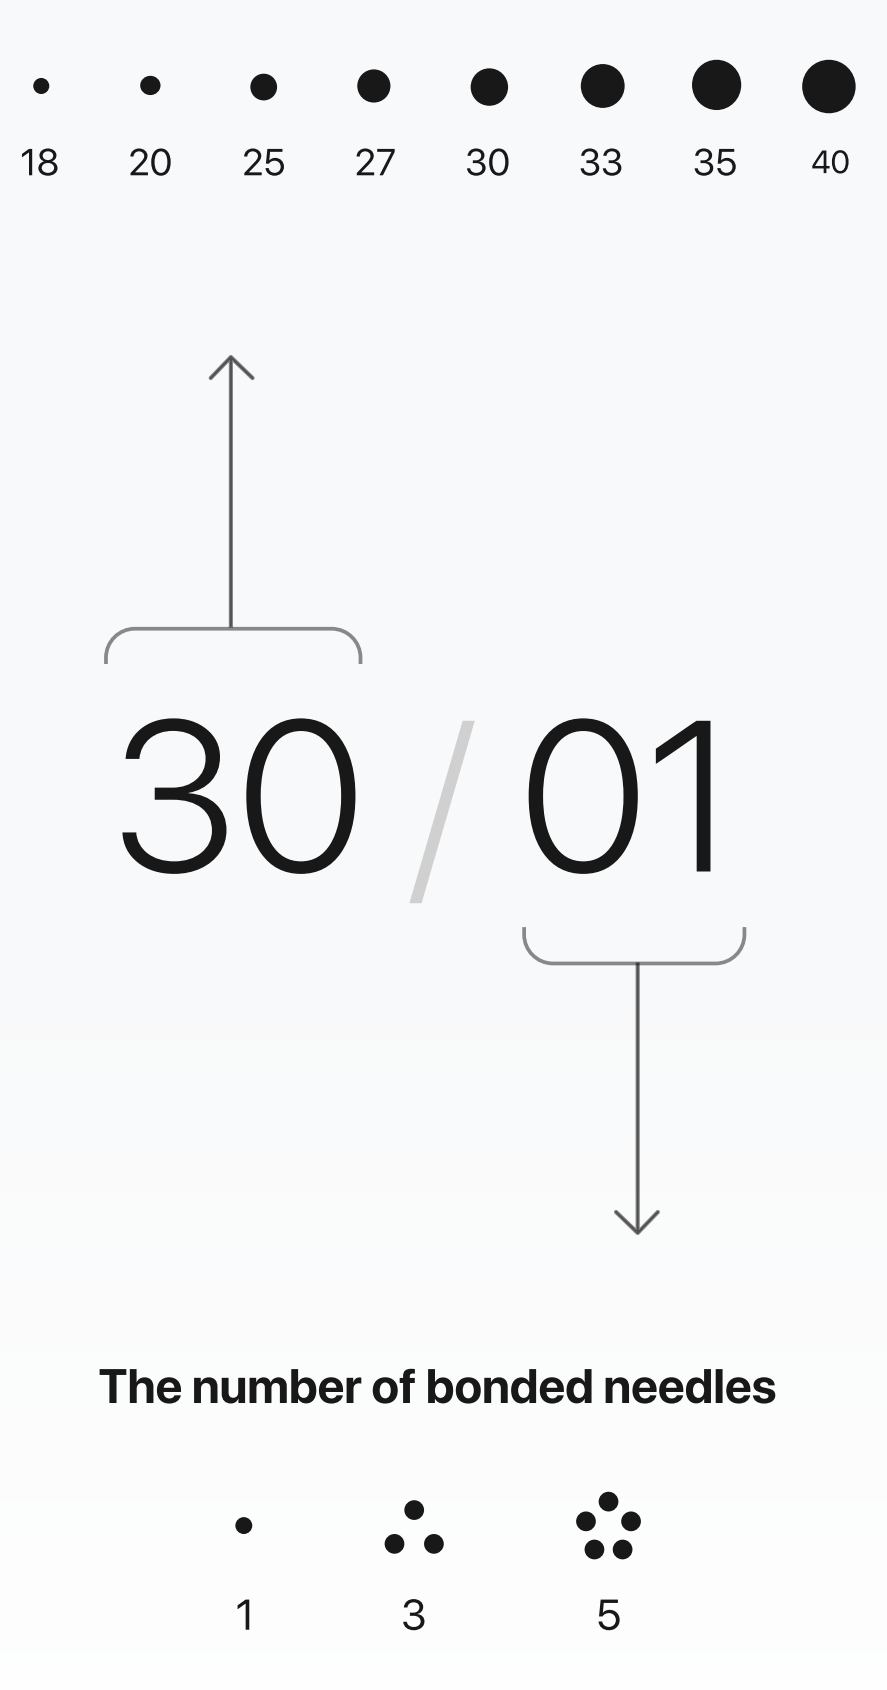
Cartriges guide



Diameter mm (needle thickness)



The number of bonded needles

Needle sharpening

The longer the sharpening, the easier and deeper the needle goes into the skin

ST	Short Taper	1.5 mm
MT	Medium Taper	3.5 mm
HLT	Half Long Taper	5.5 mm
LT	Long Taper	7.5 mm
SLT	Super Long Taper	8.5 mm

Needle diameter

Chosen based on

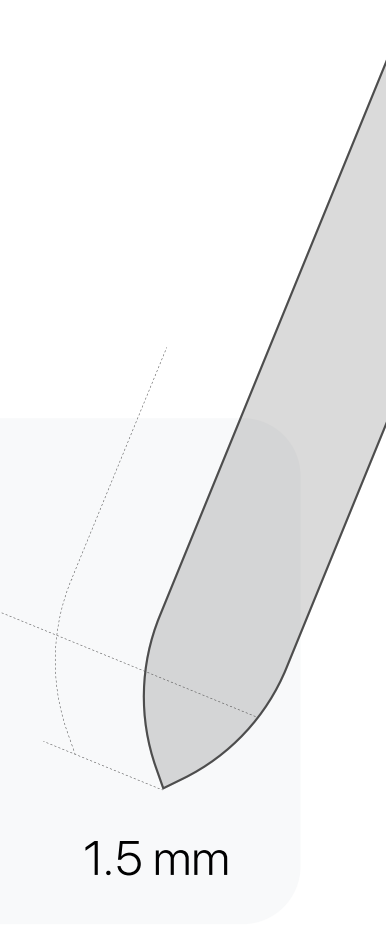
the skin type	
oily/combination	**0.27 - 0.30**
dry/aging	**0.33 - 0.35**
normal/combination	**0.33 - 0.35**
scars/scarred	**0.18 - 0.25**

the working zone	
eyebrows	**0.30, 0.33, 0.35**
intercilliary space	**0.18, 0.20, 0.25**
lips	**0.25, 0.27, 0.30**

Configuration selecting tips

RLST
Round Liner Short Taper

- Eyebrow shadow airy effect
- Clean pixels



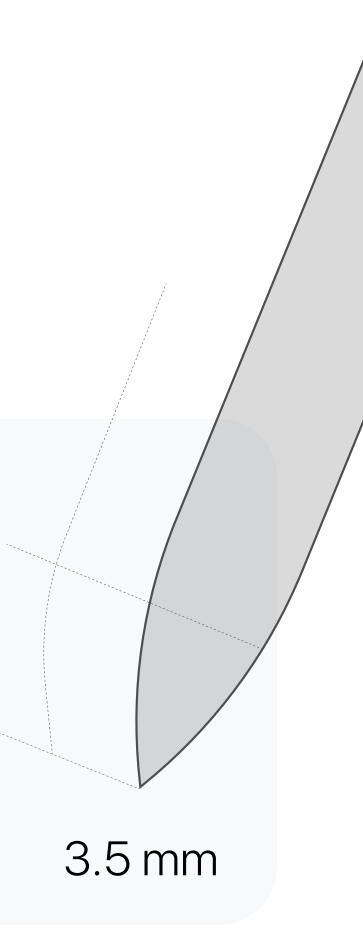
Short bullet-like sharpening.
It has a rounded and blunt tip, which prevents fast and deep puncture.

When working with it, it is important to remember to stretch the skin.

It's great for shadow layer-by-layer coating of eyebrows and gentle work on dense and thick skin, especially in places where it is important for the needle not to go too deep and for the pigment to stay on the surface only.

RLMT
Round Liner Medium Taper

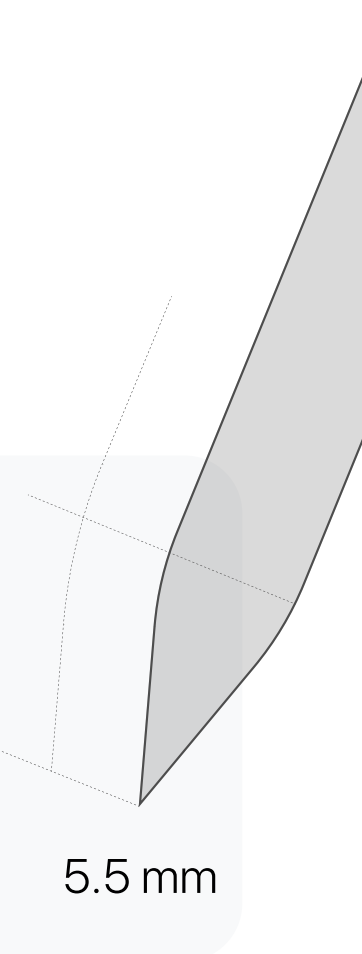
- Dense color
- Lipstick effect



Medium conical sharpening.
Quite versatile and suitable for powder technique, lips PMU or shader eyeliner effect.
The final result depends on the chosen diameter.

RLHLT
Round Liner Half Long Taper

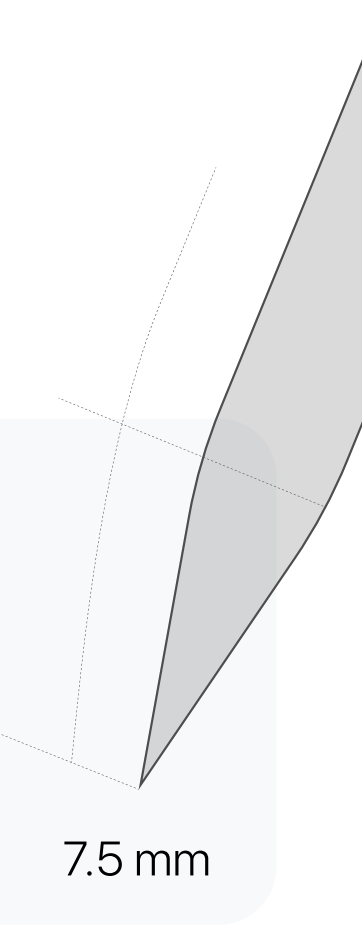
- Dense color
- Powder-like brows



Sharp blade.
The middle ground and the best option for all PM techniques. It's. perfect for both normal and oily skin and skin with bigger pores. Works great on powdery eyebrows, intercilliary space, and when a dense color of lips is required.

RLLT
Round Liner Long Taper

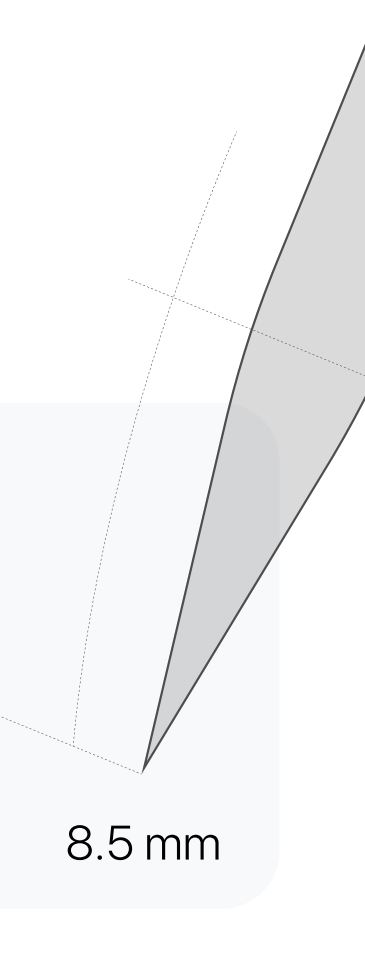
- Hair stroke
- Pixel brows



Long conical sharpening, pointed at the tip.
Is the most popular sharpening on the PM market in the CIS countries. Optimal for thin and elastic skin that sags under the needle, especially on the eyelids and lips, where a quick and effective puncture is required.

RLSLT
Round Liner Super Long Taper

- Hair stroke
- For scarred skin



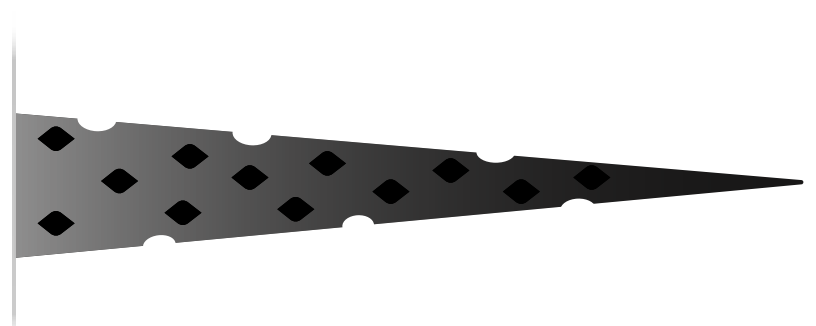
A very sharp blade that Defenderr was the first to bring to the PM market. Suitable for young, combination or scarred skin. It is perfect for hair strokes due to its sharpness.

> Beginners should be careful when working with this sharpening on the eyelids and lips, because it is necessary to control the depth of penetration so that the work does not become traumatic.

Polishing types

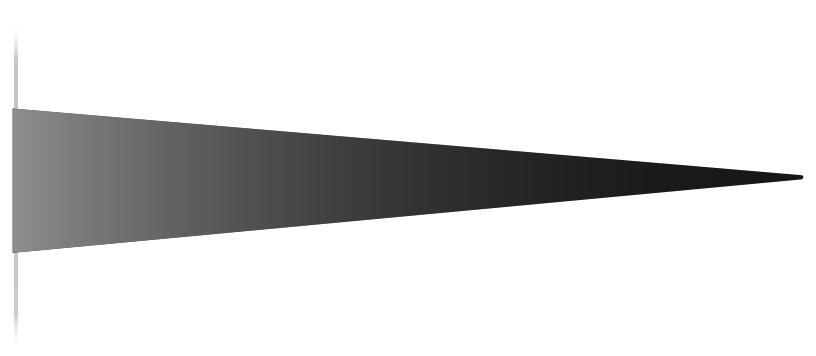
Textured needles have special micro-furrows that hold much more pigment on their rough surface, resulting in a bigger amount of the residue. Working correctly, the procedure is fast and less traumatic.

> Beginners should be careful when working with this sharpening on the eyelids and lips, because it is necessary to control the depth of penetration so that the work does not become traumatic.



Textured - RLMT-T
With micro-furrows

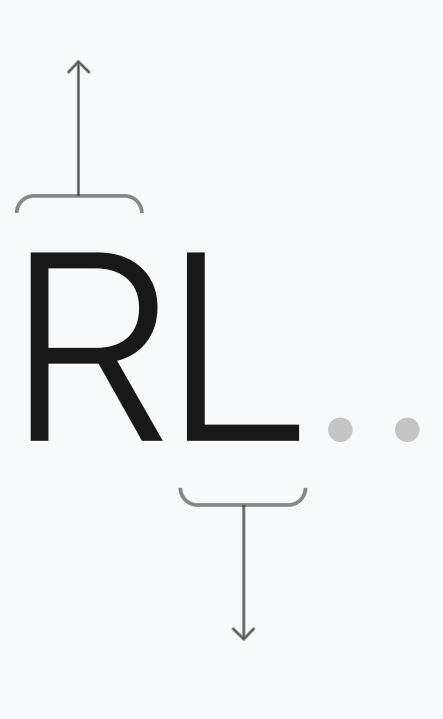
- Eyebrow shadow airy effect
- Clean pixels



Smooth
Standard needles

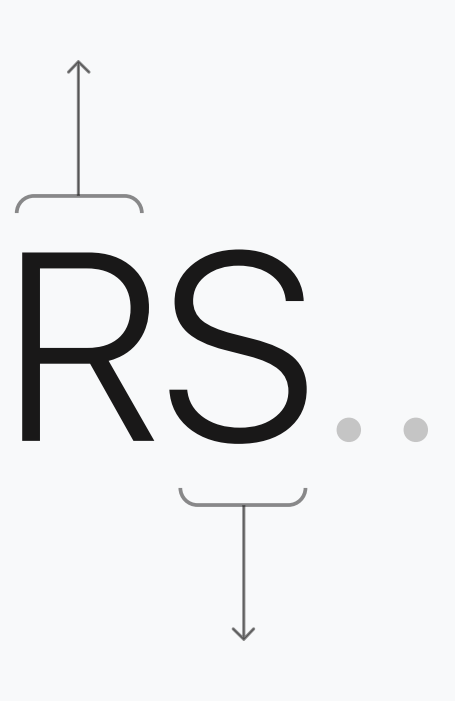
Grouping of needles

R — Round
Needles soldered into a circle

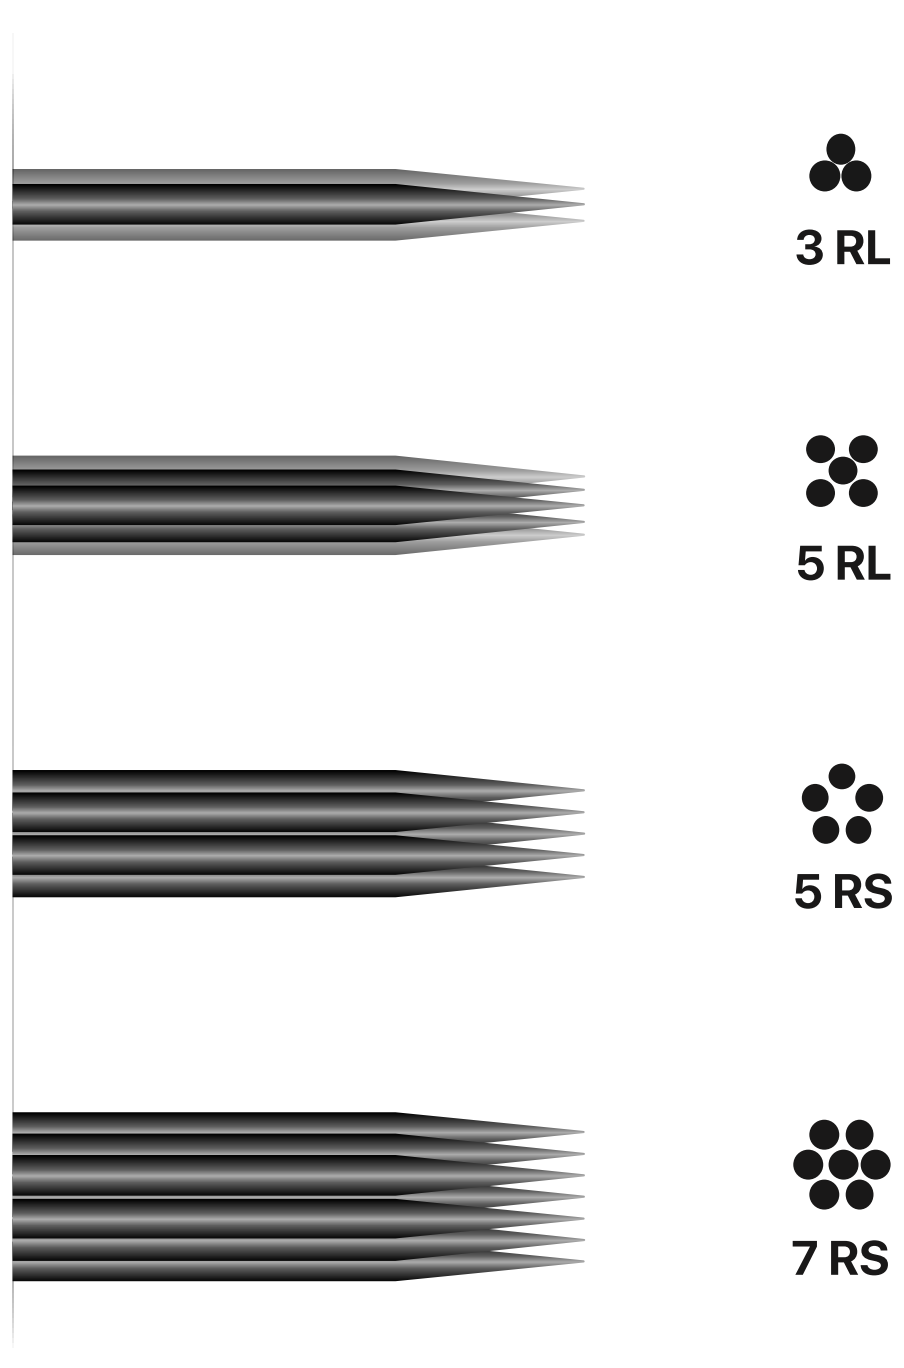


L — Liner
The needles converge into a bundle at the point of the needle. This type of needles is used for making a contour and lines.

R — Round
Needles soldered into a circle



S — Shader
The difference is in the parallel arrangement of the bonded needles. Designed for shading and filling the color in.



Magnums (SEMST)

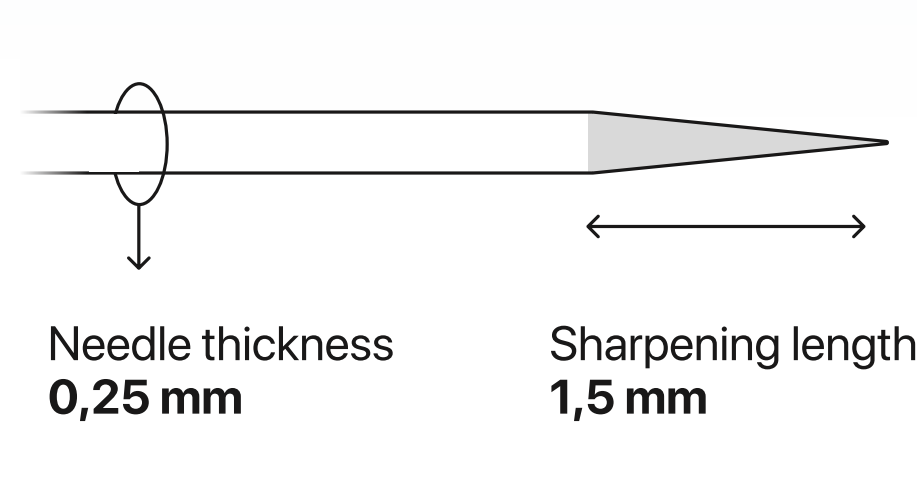
Soft Edge Magnum Short Taper

Defenderr produces two types of round magnums:

25 / 3

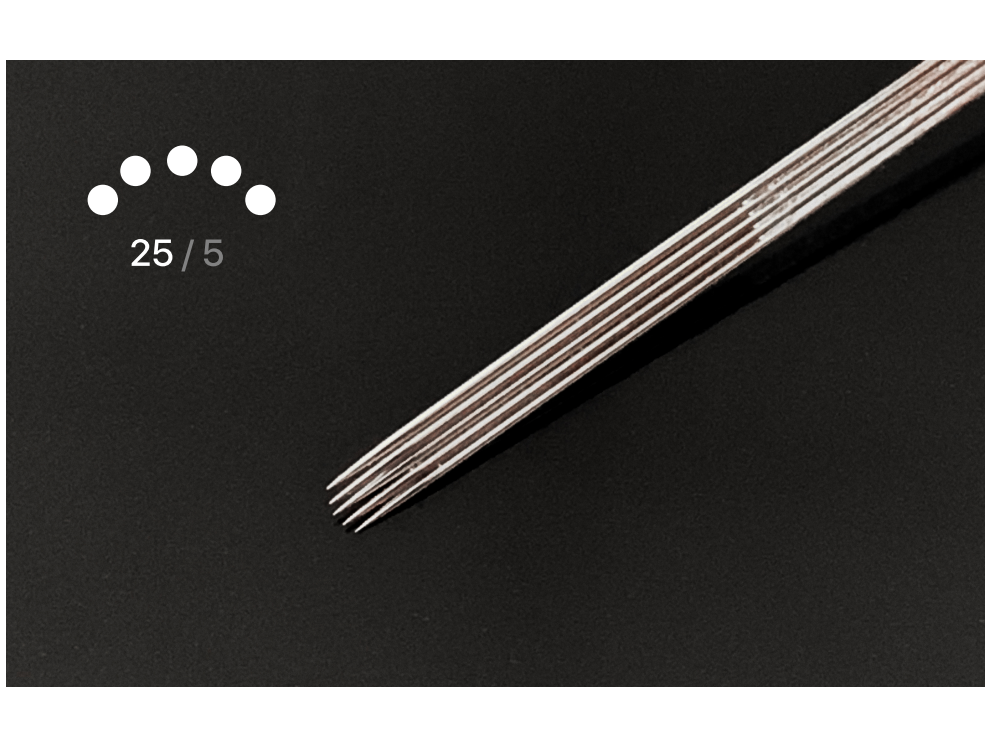
25 / 5

Magnums are one of the safest types of needles because they cause minimal damage to the outer skin of the body. They have flat bonded needles with rounded edges, the tips of which are not placed in one line, but in a semicircle.



Needle thickness
0,25 mm

Sharpening length
1,5 mm



Smooth borderlines

When working with such needles, the middle stabbing elements go into the skin as deeply as possible, and the ones the edges do it very slightly. This gives a different pattern with a smooth borderline.

Soft shading

The softest and cleanest shadows, even coloring when shading lips and the excellent color density when working with thick skin can be achieved with magnums.
